▼ Details

Proposal Format:

- The project proposal is a 1–3 pages document (800-1200 words) excluding figures.
- You are encouraged (not required) to use 1-2 figures to illustrate technical
- The proposal must be formatted and submitted as a PDF document.

Introduction:

- Describe what you are planning to achieve.
- Briefly describe related work (if applicable).

Motivation:

- Describe why your project is E.g., you can describe why your project could have a broader societal impact. Or, you may describe the motivation from a personal learning perspective.

Evaluation:

- What would the successful outcome of your project look like? In other words, under which circumstances would you consider your project to be “successful?”

- How do you measure success, specific to this project, from a technical standpoint?

Resources:

- What resources are you going to use (datasets, computer hardware, computational tools,)?

Contributions:

You are expected to share the workload evenly, and every group member is expected to participate in both the experiments and writing. (As a group, you only need to submit one proposal and one report, though.

So, you need to work together and coordinate your efforts.)

- Clearly indicate what computational and writing task each member of your group will be participating

Modifications to the Proposal. After you have received feedback from the TAs/the instructor and your project proposal has been graded, you are advised to stick to the project outline in the proposal as closely as possible. However, if there is a concept introduced in a later lecture (for instance, a machine learning algorithm that you think is more appropriate than the one you proposed), you have the option to modify your proposal, but you are not penalized if you don't. **If you wish to update your project outline, talk to a TA first.**
